

CONTENTS

PART 1

STEFFEN H. PEDERSEN	
A Cantor set type result in the field of formal Laurent series	7
ADRIAN W. DUDEK	
An explicit result for $ L(1 + it, \chi) $	23
OLIVIER BORDELLÈS	
On the ideal theorem for number fields	31
PETER BUNDSCHUH, KEIJO VÄÄNÄNEN	
Algebraic independence of reciprocal sums of powers of certain Fibonacci-type numbers	47
ADE IRMA SURIAJAYA	
On the zeros of the k -th derivative of the Riemann zeta function under the Riemann Hypothesis	69
YOSHIKATSU YASHIRO	
Approximate functional equation and mean value formula for the derivatives of L -functions attached to cusp forms	97
JAY MEHTA, G.K. VISWANADHAM	
Set of uniqueness of shifted Gaussian primes	123
JOHANNES SINGER	
On q -analogues of multiple zeta values	135
SIVANARAYANAPANDIAN SUBBURAM, RAVINDRANANATHAN THANGADURAI	
On the diophantine equation $ax^3 + by + c = xyz$	167

PART 2

NARASIMHA KUMAR	
Remarks on q -exponents of generalized modular functions	177
WIESŁAW ŻELAZKO	
All maximal commutative subalgebras occur in $L(X)$ uncountably many times	189

THOMAS ALDEN GASSERT	
Discriminants of simplest 3^n -tic extensions	193
RONY A. BITAN, RALF KÖHL (NÉ GRAMLICH)	
A building-theoretic approach to relative Tamagawa numbers of semisimple groups over global function fields	215
JEFFREY LIN THUNDER	
On sums involving products and quotients of L -functions over function fields	249
ALEXANDER E. PATKOWSKI	
On some families of integrals connected to the Hurwitz zeta function	305
JASON P. BELL, DRAGOS GHIOCA, THOMAS J. TUCKER	
The dynamical Mordell-Lang problem for Noetherian spaces	313
